

## Pinning the silencer

For users desiring to pin and weld the silencer we recommend enlisting the service of qualified gunsmith. Autogenous Tig welding is preferred. In our experience ~45 amps are sufficient for clean and structurally sound weldment.

GP suppressors have thick rear geometry allowing them to be welded, cut removed and re-welded allowing them to outlast many barrels. GP suppressors can also be rebuilt by Griffin Armament for extremely heavy users if they have surpassed their useful service life. simply contact [info@griffinarmament.com](mailto:info@griffinarmament.com) for more information.

### WARNING

Do not handle suppressor during or after use. Suppressors can reach temperatures in excess of 1000deg F under normal use. Allow suppressor to cool after firing before handling

## Features of the GP Suppressors

The GP (General Purpose) Silencers were designed to provide the customer with lightweight, durable, and affordable suppressors for general use. Constructed entirely of 17-4 stainless steel and utilizing our patented baffle technology, GP suppressors are both durable and high performance. Our patent pending HEDP (High Efficiency Dual-Purpose) baffle technology reduces back pressure while simultaneously increasing sound pressure reduction, combining typically independent performance objectives with one solution. Front and rear 19mm wrench flats provide options for traditional use or forend rail integrated applications. GP suppressors feature cone flash hider front caps, styled after 1969 patent #3,776,093 to reduce flash for low light applications. GP suppressors come pre drilled with a .125" hole for pinning to create "one stamp guns" or "one stamp uppers". The GP7™ can be pinned as short as 10.5". The GP5™ can be pinned as short as 10.5". The GP5 is rated for high pressure applications up to 220 swift. The GP7 is rated up to 300 RUM. The GP series of suppressors provide quality engineering, construction, versatility, and affordability in one.

## Installation and Use

Ensure muzzle threads are clean and degreased prior to mounting. Use a 19mm wrench and torque wrench to install. Torque suppressor to ~35 ft/lbs for the GP5™ and ~45 ft/lbs for the GP7™. Included shims can be used to clock the suppressor to a desired orientation. No thread locker is needed if proper torque is used. **MAXIMUM RECOMMENDED RATE OF FIRE** for a long service life is no more than 2 - 30 round magazines full auto followed by 14 rounds per minute sustained. Longer barrels promote longer service life however the GP5™ and GP7™ are full auto rated and do not have a barrel length requirement for use. Verify stable bullet flight before installing suppressor to host firearm.

## Confirm Alignment

Clear your firearm in accordance with its manufacturers user manual. Install the Taper Mount per instructions. After mounting the muzzle device with a shim set, attach the silencer to the mount. With the Recce silencer firmly tightened onto the mount look down the silencer bore from the end cap illuminating the bore with a light. Confirm visual alignment by ensuring the bore of the silencer is in the center of the bore of the firearms barrel. If you do not feel capable of confirming alignment take your firearm to your Griffin Dealer. Most silencer dealers that provide gunsmithing services have suppressor alignment check rods and other tools capable of fitting your silencer to your firearm. Keep in mind each firearm you use this silencer on needs to be checked for alignment.

**WARNING: FAILURE TO READ AND UNDERSTAND THIS MANUAL PRIOR TO USE MAY RESULT IN INJURY OR DAMAGE**

## Lifetime Limited Warranty

With over a decade of suppressor manufacturing Griffin is proud to support it's customers with excellent support and service.

### PRODUCT LIFETIME LIMITED WARRANTY:

Subject to the limitations outlined below, Griffin Armament will repair or replace free of charge any product we manufacture for the duration of this lifetime warranty. This warranty is unlimited in duration and covers at Griffin Armament's sole discretion, service, repair, and/or replacement of damaged products caused by normal use. Any repair not covered by the warranty will be billed at a maximum of 30% of current MSRP for a comparable product, subject to BATFE transfer fees as required.

**LIMITATIONS:** Griffin Armament's warranty does not cover loss, normal wear, damage to our product or the host weapon system resulting in whole or in part from abusive or negligent use, unauthorized modification, improperly threaded barrels, improperly mounted suppressors, improperly loaded or re-loaded ammunition, or neglect. Finish wear is cosmetic and is not covered by this warranty. Any repairs to the unit made necessary by the above mentioned factors may be invoiced to the owner at a maximum of 30% of current MSRP for the most comparable product. The individual barrel lengths and calibers warranted are listed in the manual you receive with your product, or on the product page [applicable only to the most current model of the respective product]. In all cases refer to the product manual for product limitations prior to using a Griffin Armament product. Warranty is subject to change without notice.

Griffin Armament was started by  
combat veterans with one goal...

To create quality, high performance products, that you can depend on. Knowing that high performance kit is a lifeline to coming back from mission, Griffin sought out to develop innovative and quality products worthy of use on deployment. Whether you are hunting, sport shooting, training, or professionally employing firearms, Griffin kit is up to the task.
